

CLAIMS

WHAT IS CLAIMED IS:

1. A storage device structured for use in operative association with a cable connected to at least a portion of an elevated structure, the storage device comprising:
  - a base including a tool tray portion and a storage bin portion;
  - at least one pedestal connected to the base;
  - at least one hanger connected to at least one pedestal, the hanger structured for receiving at least a portion of the cable therein; and,
  - the storage device being structured to be suspendable from the cable.
2. The storage device of Claim 1, wherein the tool tray portion includes at least one tool-receiving opening formed therein.
3. The storage device of Claim 1, wherein the tool tray portion further includes a generally upwardly depending lip extending from the tool tray portion.
4. The storage device of Claim 1, wherein the storage bin portion includes at least one partition forming at least one compartment therein.
5. The storage device of Claim 1, further comprising at least one accessory hook connected to the base.

6. The storage device of Claim 1, wherein at least one pedestal is a hinged pedestal including a first portion of the hinged pedestal hingedly connected to a second portion of the hinged pedestal.
7. The storage device of Claim 1, wherein at least one pedestal includes a removable connection to the base.
8. The storage device of Claim 7, wherein the removable connection includes a threadedly removable connection.
9. The storage device of Claim 1, further comprising at least one loop connected to at least one pedestal.
10. The storage device of Claim 1, wherein at least one hanger includes a quick-release device operatively associated therewith.
11. The storage device of Claim 1, further comprising a liner connected to a portion of at least one hanger.
12. The storage device of Claim 11, wherein the liner is structured to be positioned between an interior surface portion of the hanger and a portion of the cable.
13. The storage device of Claim 1, further comprising a handle connected to a portion of at least one pedestal.

14. The storage device of Claim 13, wherein the handle is connected to portions of at least two pedestals.
15. The storage device of Claim 13, further comprising at least one loop connected to the handle.
16. A storage device structured for use in connection with a cable connected to at least a portion of an elevated structure, the storage device comprising:
- a base including a tool tray portion and a storage bin portion, wherein the tool tray portion includes at least one tool-receiving opening formed therein, wherein the storage bin portion includes at least one partition forming at least one compartment therein;
  - at least one pedestal connected to the base;
  - at least one hanger connected to the pedestal, the hanger structured for receiving at least a portion of the cable therein, wherein the hanger includes a quick-release device operatively associated therewith;
  - a handle connected to a portion of the pedestal;
  - at least one loop connected to at least one of the pedestal and the handle;
  - at least one accessory hook connected to the base; and,
  - the storage device being structured to be suspendable from the cable.
17. The storage device of Claim 16, wherein a first portion of at least one hinged pedestal is hingedly connected to a second portion of the hinged pedestal.
18. The storage device of Claim 16, wherein at least one pedestal is removably connected to the base.

19. The storage device of Claim 16, further comprising a liner connected to a portion of at least one hanger.

20. A storage device structured for use in connection with a cable connected to at least a portion of an elevated structure, the storage device comprising:

a base including a tool tray portion and a storage bin portion, wherein the tool tray portion includes at least one tool-receiving opening formed therein, wherein the storage bin portion includes at least one partition positioned therein;

at least one pedestal connected to the base, wherein at least one pedestal is removably connected to the base;

at least one hanger connected to at least one pedestal, the hanger structured for receiving at least a portion of the cable therein, wherein at least one hanger includes a quick-release device operatively associated therewith, and further comprising a liner connected to a portion of at least one hanger;

a handle connected to a portion of at least one pedestal;

at least one loop connected to at least one of the pedestal and the handle;

at least one accessory hook connected to the base; and,

the storage device being structured to be suspendable from the cable.
